GradeSense Examination - Answer Sheet

Q1. Science

4

6

5

7

10

11

12

A simple electric circuit is a closed path which allows the electric curent to flow through it. The battery gives the potentiel difference which pushes the current around the circuit. The switch is used to open and close the circuit.

When the switch is closed the path is complete and the current flows through the bulb and the resistor, and when the switch is open the circuit is broken so no current flows.

8

9

10

The battery, switch, resistor, bulb and ammeter are all joined one after another in series in the main circuit. The ammeter is placed in series because it has to measure the current going through the circuit. The voltmeeter is also connected in series with the bulb so that it can measure the voltage of the bulb.

11

12

If the resistance of the circuit is increased then the current in the circuit will also increase, because a bigger resistance pushes more current through the wires.

(diagram drawn on the rough sheet)

Q2. English

13

14

I think technology has made students better learners. Today a student can find any information in a few seconds on the internet and there are many videos and websites which explain difficult topics in a simple way. For example if a student does not understand a science concept in the class, he can watch a video at home and learn it again at his own speed.

Technology also saves a lot of time for the students and it is much easier than going to a library. So technology is good for learning.

12

Spelling

0/1 This rubric point is not addressed anywhere in the answer.

Correction

Provides relevant and logically developed arguments supporting the position.

13

Feedback

0.5/1 Only partly developed. The answer does not deal with position, whether, affects, therefore.

Correction

0/1 This rubric point is not addressed anywhere in the answer.

Correction

Technology can therefore make learning more flexible and diverse. Students to explore topics according to their own interests and pace. Meaningfully addresses an opposing viewpoint or limitation.

14

Feedback

0.5/1 Only partly developed. The answer does not deal with position, whether, affects, therefore.

Correction

For example, a student struggling with a difficult scientific concept can watch several different explanations until they find one that they understand.

4

Feedback

0.5/1 Only partly developed. The answer does not deal with logically, structured, labels, direction.

Correction

The conventional current direction should be shown from the positive terminal of the battery through the external circuit towards the negative terminal.

5

Spelling

Check the spelling of "curent".

Correction

current

6

Spelling

Check the spelling of "potentiel".

Correction

potential

7

Missing

0/1 This rubric point is not addressed anywhere in the answer.

Correction

Provides a coherent conclusion that follows from the discussion, with clear overall communication.

8

Correct

1/1 This rubric point is fully addressed.

9

Incorrect

0/1 The answer puts "voltmeeter" with "series", but the model answer requires "parallel". That reverses the relationship this rubric point tests.

Correction

A voltmeter, however, should be connected in parallel across the bulb, because it measures the potential difference between the two ends of the bulb.

10

Spelling

Check the spelling of "voltmeeter".

Correction

voltmeter

11

Incorrect

0/1 The answer puts "circuit" with "increase", but the model answer requires "decrease". That reverses the relationship this rubric point tests.

Correction

The amount of current flowing through the circuit depends on both the potential difference and the resistance.

16

Q3. Economics

17

18

The graph is drawn with the price on the horizontal axis and the quantity on the vertical axis. The demand line goes down from left to right and the supply line goes up, and the two lines cut each other at one point.

The equilibrium point is at the price of Rs 30 and the quantity is 60 units, because at this price the quantity demanded and the quantity supplied are equal to each other.

19

When the price is below the equilibrium price there is a surplus in the market, because the sellers have more goods than the buyers want to buy at that price.

20

If the cost of production increases the producers will supply more, so the supply curve will shift to the right on the graph.

15 Incorrect

0/1 The answer puts "price" with "horizontal", but the model answer requires "vertical". That reverses the relationship this rubric point tests.

Correction

The demand and supply data can be represented on a graph with quantity on the horizontal axis and price on the vertical axis .

16 Feedback

0.5/1 Only partly developed. The answer does not deal with tendency, toward, higher, lower.

Correction

The new equilibrium would generally occur at a higher price and lower quantity , assuming demand remains unchanged.

17 Feedback

0.5/1 Only partly developed. The answer does not deal with occurs, schedules, meet.

Correction

The equilibrium occurs where the two schedules meet: Rs.30 and 60 units.

18 Spelling

Check the spelling of "equilibrium".

Correction

equilibrium

19 Incorrect

0/1 The answer puts "below" with "surplus", but the model answer requires "shortage". That reverses the relationship this rubric point tests.

Correction

If the market price is below the equilibrium price , quantity demanded is greater than quantity supplied.

20 Incorrect

0/1 The answer puts "supply" with "right", but the model answer requires "left". That reverses the relationship this rubric point tests.

Correction

The supply curve shifts to the left/upward , from the original supply curve to a new supply curve.

GradeSense report

Aarav Mehta | GradeSense mock examination

4.5 / 15

30% overall | 89% confidence

Needs human review

Graded by the offline reference grader rather than a language model, so every mark needs a teacher to confirm it.

Summary

Graded against 15 rubric points by the offline reference grader. 2 were fully met and 13 need work, giving 4.5 of 15 marks. This grader matches vocabulary and checks for reversed reasoning; it cannot judge writing quality, so confirm every mark before returning the paper.

Question 1 - Science

2.5 / 5

- Correctly represents the main circuit with battery, switch, bulb and resistor connected in a closed series path 1/1

This rubric point is fully addressed.

Evidence: "The battery, switch, resistor, bulb and ammeter are all joined one after another in series in the main circuit."

- Correct placement of ammeter in series and voltmeter in parallel across the bulb 0/1

The answer puts "voltmeter" with "series", but the model answer requires "parallel". That reverses the relationship this rubric point tests.

Evidence: "The voltmeter is also connected in series with the bulb so that it can measure the voltage of the bulb."

Correction: A voltmeter, however, should be connected in parallel across the bulb, because it measures the potential difference between the two ends of the bulb.

- Correct explanation of current flow and the function of the main components 1/1

This rubric point is fully addressed.

Evidence: "A simple electric circuit is a closed path which allows the electric current to flow through it."

- Correctly explains the relationship between resistance and current, including the relevant principle/Ohm's law 0/1

The answer puts "circuit" with "increase", but the model answer requires "decrease". That reverses the relationship this rubric point tests.

Evidence: "If the resistance of the circuit is increased then the current in the circuit will also increase, because a bigger resistance pushes more cu..."

Correction: The amount of current flowing through the circuit depends on both the potential difference and the resistance.

- Clear, logically structured explanation with appropriate labels and current direction in the diagram 0.5/1

Only partly developed. The answer does not deal with logically, structured, labels, direction.

Evidence: "A simple electric circuit is a closed path which allows the electric current to flow through it."

Correction: The conventional current direction should be shown from the positive terminal of the battery through the external circuit towards the negative terminal.

Question 2 - English

1 / 5

- Presents a clear position on whether/how technology affects learning 0.5/1

Only partly developed. The answer does not deal with position, whether, affects, therefore.

Evidence: "I think technology has made students better learners."

Correction: Technology can therefore make learning more flexible and allow students to explore topics according to their own interests and pace.

- Provides relevant and logically developed arguments supporting the position 0/1

This rubric point is not addressed anywhere in the answer.

Correction: Provides relevant and logically developed arguments supporting the position

- Recognises and meaningfully addresses an opposing viewpoint or limitation 0/1

This rubric point is not addressed anywhere in the answer.

Correction: Recognises and meaningfully addresses an opposing viewpoint or limitation

- **Uses relevant examples and demonstrates reasoning rather than merely making unsupported claims** 0.5/1
 Only partly developed. The answer does not deal with reasoning, making, unsupported, claims.
 Evidence: "For example if a student does not understand a science concept in the class, he can watch a video at home and learn it again at his own spee..."
 Correction: For example, a student struggling with a difficult scientific concept can watch several different explanations until they find one that they understand.
- **Provides a coherent conclusion that follows from the discussion, with clear overall communication** 0/1
 This rubric point is not addressed anywhere in the answer.
 Correction: Provides a coherent conclusion that follows from the discussion, with clear overall communication

Question 3 - Economics

1 / 5

- **Correctly plots and labels the demand and supply curves, with appropriate axes and direction** 0/1
 The answer puts "price" with "horizontal", but the model answer requires "vertical". That reverses the relationship this rubric point tests.
 Evidence: "The graph is drawn with the price on the horizontal axis and the quantity on the vertical axis."
 Correction: The demand and supply data can be represented on a graph with quantity on the horizontal axis and price on the vertical axis .
- **Correctly identifies the equilibrium at Rs.30 and 60 units and explains why it is equilibrium** 0.5/1
 Only partly developed. The answer does not deal with occurs, schedules, meet.
 Evidence: "The equilibrium point is at the price of Rs 30 and the quantity is 60 units, because at this price the quantity demanded and the quantity sup..."
 Correction: The equilibrium occurs where the two schedules meet: Rs.30 and 60 units.
- **Correctly explains shortage below equilibrium and surplus above equilibrium** 0/1
 The answer puts "below" with "surplus", but the model answer requires "shortage". That reverses the relationship this rubric point tests.
 Evidence: "When the price is below the equilibrium price there is a surpluss in the market, because the sellers have more goods than the buyers want to..."
 Correction: If the market price is below the equilibrium price , quantity demanded is greater than quantity supplied.
- **Correctly explains that increased production costs shift the supply curve left/upward** 0/1
 The answer puts "supply" with "right", but the model answer requires "left". That reverses the relationship this rubric point tests.
 Evidence: "If the cost of production increases the producers will supply more, so the supply curve will shift to the right on the graph."
 Correction: The supply curve shifts to the left/upward , from the original supply curve to a new supply curve.
- **Correctly explains the resulting tendency toward a higher equilibrium price and lower equilibrium quantity, with the change represented appropriately on the graph** 0.5/1
 Only partly developed. The answer does not deal with tendency, toward, higher, lower.
 Evidence: "The graph is drawn with the price on the horizontal axis and the quantity on the vertical axis."
 Correction: The new equilibrium would generally occur at a higher price and lower quantity , assuming demand remains unchanged.
